UNATTENDED

- Fully automated and unattended.
- Multi-departmental reports made easy. F.e: test + diagnostic + invoice into a single report.
- Advanced report builder will visually allow you to create your own reports (WYSIWYG).
- Save money by defining which output to use based on the report context data. F.e. patient type, insurance company, etc...
- Patients will get a report specially addressed to him.
- Insurance companies will set the needed information in real - time.
- Marketing reports advertisements and look & feel based on context details. F.e.: use this cover for any insurance company.

PRINT

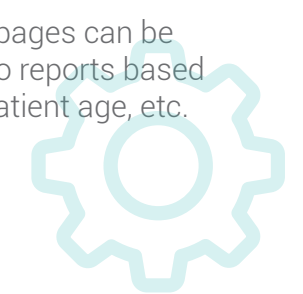

1 Collect

- Medical Patient Global integrates with medical applications and internal workflows.
- Connectivity to different source applications in a non-intrusive model.
- Analyzes and identifies every component (based on defined criteria).
- Index components and associated metadata (TAG, EXIF, Full-Text, etc.).

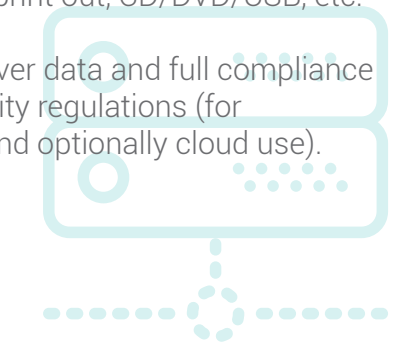

2 Process

- Pre-configured reports (rich documents) individually defined during the installation base via intuitive designer tool.
- Reports are completed once all data has been made available from the different sources.
- Dynamic information pages can be automatically added to reports based on report type, date, patient age, etc.

3 Archive

- Local storage of generated rich documents.
- Easy document access from any source (web, mobile, external application)
- Automatically formatted for different output formats: web, smartphone, tablet, book, A3/A4 print out, CD/DVD/USB, etc.
- Full control over data and full compliance to data security regulations (for on premise and optionally cloud use).

4 Notify and ...

- Automated rule-based delivery.
- Web portal with rich document viewer.
- Mobile rich document viewer.
- User profiles.
- Patient studies & history.
- Patient appointment and messages.
- Referring doctors / insurances.
- Internal web portal / rich document archive.
